

## PLANKS AND EXPANSION JOINTS

Novostrat offer a wide range of Polyethylene Foam in rolls, planks and strips for use in both the packaging and construction Industries.

For packaging planks can be used by converters to create packaging solutions designed to protect, insulate and isolate, clients products from production through warehousing and distribution to delivery.

For construction planks and strips are designed to offer thermal, acoustic and isolation benefits e.g. expansion joints.

Products are available in a variety of dimensions to suit customers requirements, please contact our sales department for individual specifications.
